Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazucoyo Geogawa and mananogaster BAC library was prepared by Kazucoyo Geogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial EcoRI digettion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GSS 03-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1490 circicio cececió de conseción de constante de contra

Site_2: XhoI; cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the following 5' adaptor: GGCACGAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies).
Note: this is a NIH_MGC Library."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Drosophila melanogaster (fruit fly)

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Erosophila DNA provided by the BDGP from the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Syngenta Arabidopsis Insertion Library (SAIL) lines are available
through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not
class: TDNA tagged.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               96 This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a WRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1187 GGGGGGCGGGGGCCCSCGSGSCGSCCSCGSGGGGGGGGCCSGGGGGCCCCC 1128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1.0.
Sequence 1.0.
Sequence 1.0.
Sequence 1.0.
Patent No. US20020098582A1
GENERAL INFORMATION:
APPLICANT: Geron Corporation
APPLICANT: Gold, Joseph
APPLICANT: Lebkowski, Jane
TITLE OF INVENTION: Tpacked stem cells
FILE REFERENCE: 096/003
CURRENT APPLICATION NUMBER: US/09/783,203
CURRENT APPLICATION NUMBER: 60/253,443
PRIOR FILING DATE: 2000-11-27
NUMBER OF SEQ ID NOS: 7
SOFTWARE: Patentin version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TYPE: DNA

Sequence 6, Application US/08974549A
; Batent No. 6166178
; GENERAL INFORMATION:
; APPLICANT: Lingner, Joachim
APPLICANT: Chapman, Karen B.
APPLICANT: Chapman, Karen B.
APPLICANT: Andrews, Milliam H.
; APPLICANT: Andrews, William H.
; APPLICANT: Andrews, Milliam H.
; TITLE OF INVENTION: Human Telomerase Catalytic Subunit; NUMBER OF SEQUENCES: 727
; CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:

Recombinant viral vector comprising an adenoviral nucleic acid backbone, useful for treating neoplastic disorders such as lung, breast, prostate or colon cancer.

Claim 11; Page 21; 226pp; English.

The present invention relates to a new recombinant viral vector

comprising an adenoviral nucleic acid backbone, where the backbone comprises in sequential order, a left inverted terminal repeat (ITR), a termination signal sequence, an SEF responsive promoter which is operably linked to a gene essential for replication of the recombinant viral vector, an adenoviral packaging signal and a right ITR. The methods and compositions of the present invention are useful for treating a neoplastic condition such as lung, breast, prostets or colon cancer. The viral vectors are useful in studying methods of killing neoplastic cells in vitro or in animal models. The present nucleic acid sequence represents a human TERT promoter of the invention

```
The invention relates to a transcriptional regulatory sequence with a human telomere reverse transcriptase (hTERT) promoter linked to a nucleotide sequence comprising one or more c-byc binding sites and/or one or more Spl binding sites and/or one composition are useful for treating cancer, e.g. stomach, lung, ovarian, liver, bronchogenic, nasopharyngeal, laryngeal, pancreatic, bladder, colon, cervical, breast, brain, or head and neck cancer. This sequence corresponds to the wild type human telomerase reverse transcriptase (hTERT) promoter sequence used to generate the novel sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The invention relates to a transcriptional regulatory sequence with a human telomere reverse transcriptese (hTRRT) promoter linked to a nucleotide sequence comprising one or more c-Myc binding sites and/or one or more Spl binding sites. The transcriptional regulatory sequence and composition are useful for treating cancer, e.g. stomach, lung, ovarian, liver, bronchogenic, nasopharyngeal, laryngeal, pancreatic, bladder, colon, cervical, breast, brain, or had and neck cancer. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New transcriptional regulatory sequence with a human telomere reverse transcriptase promoter, useful for treating cancer, e.g. stomach, lung, ovarian, liver, pancreatic, bladder, colon, cervical, breast, brain, or head and neck cancer.
